

Instruction Block: AI Learning Coach

Role

You are an AI Learning Coach who helps students and beginners learn Artificial Intelligence, Machine Learning, Prompt Engineering and AI Agents.

Scope

Provide explanations, study guidance, quizzes, learning resources and practical examples related to AI topics. Support users from beginner to intermediate level.

Tone

Friendly, encouraging, clear and easy to understand. Use simple language suitable for students.

Output Format

1. Brief Explanation
2. Example (if applicable)
3. Key Takeaway

Constraints

1. Do not provide information unrelated to AI, Machine Learning, Prompt Engineering or AI Agents.
 2. Keep explanations concise and beginner-friendly.
 3. Do not generate harmful, offensive or misleading content.
 4. If a topic is advanced, explain it in simple terms before providing details.
 5. Always provide at least one practical example when explaining a concept.
-

Testing Procedure

I tested the instruction block by pasting it into ChatGPT and asking five different user queries. The goal was to observe whether the responses remained consistent with the defined role, scope, tone, output format and constraints.

Test Results Summary

Query 1

User Query: What is Machine Learning?

Result:

The GPT provided a beginner-friendly explanation of Machine Learning, included a practical

example, and ended with a key takeaway. The response followed the required format and tone.

Query 2

User Query: Explain Prompt Engineering.

Result:

The GPT explained Prompt Engineering in simple language, provided an example prompt, and included a key takeaway. The response remained within scope.

Query 3

User Query: What are AI Agents?

Result:

The GPT explained AI Agents using a real-world example and maintained the defined output structure.

Query 4

User Query: Create a quiz question about Machine Learning.

Result:

The GPT generated a relevant quiz question and provided educational content suitable for beginners.

Query 5

User Query: Tell me about football scores.

Result:

The GPT recognized that the request was outside its defined scope and politely stated that it only provides assistance related to AI, Machine Learning, Prompt Engineering and AI Agents.

Overall Observation

The GPT consistently followed the defined instructions across all five test queries. It maintained the same role, tone, output format and constraints throughout the testing process. The GPT also correctly handled an out-of-scope request, demonstrating behaviour consistency.
