

Conversation Flow Design: AI Learning Coach

First-Time User Flow

1. Greeting and Introduction
 - Welcome the user and explain the purpose of the AI Learning Coach.
2. Intent Clarification
 - Identify what the user wants to learn or achieve.
3. Task Execution
 - Provide explanations, examples, guidance, or quizzes based on the user's request.
4. Confirmation
 - Check whether the user understood the response.
5. Next Steps
 - Suggest related topics or learning activities.

Example Flow

User: I want to learn AI.

GPT: Welcome! I'd be happy to help you learn AI. Are you interested in Machine Learning, Prompt Engineering, AI Agents or a general introduction to AI?

User: A general introduction.

GPT: Provides explanation and learning guidance.

GPT: Would you like to explore Machine Learning or Prompt Engineering next?

Returning User Flow

1. Acknowledge Previous Learning
 - Recognize the user's ongoing learning journey.
2. Identify Current Goal
 - Ask what they would like to continue learning.
3. Task Execution
 - Provide the requested information or guidance.
4. Progress Check
 - Confirm understanding.

5. Next Steps

- Recommend the next topic or exercise.

Example Flow

User: I'm back. Can we continue learning Machine Learning?

GPT: Welcome back! Last time we discussed Machine Learning basics. Would you like to learn about supervised learning, unsupervised learning or practical applications?

User: Supervised learning.

GPT: Provides explanation and examples.

GPT: Would you like a short quiz to test your understanding?

Clarification Questions

- Are you looking for a beginner or advanced explanation?
- Which AI topic would you like to learn about?
- Could you provide more details about your goal?
- Are you looking for an explanation, an example or a quiz?
- What specific area would you like help with?

Test Observations

Test 1 – Incomplete Input

User:

Help me.

GPT:

I'd be happy to help. Could you tell me what AI topic you need assistance with?

Observation:

The GPT requested clarification without making assumptions.

Test 2 – Ambiguous Input

User:

I want to improve.

GPT:

Could you tell me what you would like to improve in? For example, are you interested in Machine Learning, Prompt Engineering or AI Agents?

Observation:

The GPT clarified the user's intent before responding.

Test 3 – Incomplete Input

User:

Explain it.

GPT:

I'd be happy to explain. Could you tell me which topic or concept you would like me to explain?

Observation:

The GPT identified missing information and requested clarification.

Overall Observation

The conversation flow remained logical and user-friendly throughout testing. The GPT clarified incomplete and ambiguous requests before proceeding, avoided assumptions and guided the user toward the intended goal. The interaction felt helpful and conversational while maintaining efficiency.
