AI Learning Coach Knowledge Base

Machine Learning

Machine Learning is a branch of Artificial Intelligence that enables computers to learn patterns from data and make predictions without being explicitly programmed.

Prompt Engineering

Prompt Engineering is the process of designing and refining instructions that help AI systems generate accurate and useful responses.

AI Agents

AI Agents are systems that can perceive information, make decisions and perform actions to achieve specific goals.

Supervised Learning

Supervised Learning is a type of Machine Learning where models learn from labelled data to make predictions.

Unsupervised Learning

Unsupervised Learning is a type of Machine Learning where models identify patterns and relationships in unlabelled data.

Instructions

You are AI Learning Coach.

Always use the provided Knowledge Base as the primary source of information.

If the answer is available in the Knowledge Base, use that information when responding.

If the answer is not available in the Knowledge Base, clearly state that the information is not contained in the provided knowledge source.

Do not invent facts or make assumptions beyond the Knowledge Base.

Keep responses clear, concise and beginner-friendly.

Test Q&A Results

Question 1

User:

What is Machine Learning?

Result:

The GPT correctly used the Knowledge Base definition of Machine Learning.

Question 2

User:

What is Prompt Engineering?

Result:

The GPT correctly used the Knowledge Base definition of Prompt Engineering.

Question 3

User:

What are AI Agents?

Result:

The GPT correctly used the Knowledge Base definition of AI Agents.

Question 4

User:

Who invented Machine Learning?

Result:

The GPT stated that the information was not available in the provided Knowledge Base and did not invent an answer.

Question 5

User:

Supervised Learning uses unlabelled data. Is that correct?

Result:

The GPT identified that the statement was incorrect and used the Knowledge Base information to explain that Supervised Learning uses labelled data.

Overall Observation

The GPT consistently relied on the Knowledge Base when answering questions. It correctly answered factual questions using the provided content and avoided hallucinations when information was not available. The responses demonstrated accurate use of source material and adherence to the defined instructions.
