

Tool Usage Rules – AI Learning Coach

Enabled Tool

Web Browsing Tool

Tool Usage Rules

1. Use the web browsing tool only when the user requests current, recent or real-time information.
2. Use the web browsing tool when information needs verification from external sources.
3. Use the web browsing tool when answering questions about recent events, trends or updates.
4. Do not use the web browsing tool for basic AI concepts that can be explained from existing knowledge.
5. Do not use the web browsing tool for simple educational explanations.
6. If the user's request can be answered accurately without external information, respond directly without using a tool.
7. Minimize unnecessary tool usage to improve efficiency and user experience.

Governance Principles

- Use tools only when they add value to the response.
- Avoid tool calls for static content.
- Prefer direct answers when sufficient information is already available.
- Use tools responsibly and only when required by the user's request.

Test Examples

Test 1 – Tool Required

User:

What are the latest developments in Artificial Intelligence?

Expected Behaviour:

Use the web browsing tool because the question requires current information.

Observation:

The GPT identified that recent information was needed and used the appropriate tool.

Test 2 – Tool Required

User:

What are today's top AI news headlines?

Expected Behaviour:

Use the web browsing tool because the request involves current news.

Observation:

The GPT used the tool to retrieve up-to-date information.

Test 3 – Tool Not Required

User:

What is Machine Learning?

Expected Behaviour:

Respond directly without using a tool because this is a standard educational question.

Observation:

The GPT provided a direct explanation without requiring external information.

Test 4 – Tool Not Required

User:

Explain Prompt Engineering.

Expected Behaviour:

Respond directly without using a tool.

Observation:

The GPT answered using existing knowledge.

Test 5 – Tool Not Required

User:

Give me a quiz question about AI Agents.

Expected Behaviour:

Respond directly without using a tool.

Observation:

The GPT generated a quiz question without external assistance.

Overall Observation: The GPT used tools only when current or externally verified information was required. For educational and static questions, it responded directly without using tools. This demonstrated appropriate tool governance and avoidance of unnecessary tool usage.
