

Project GPT Exercises – Intermediate Level

Exercise 5 – Step 6: Decision Rules

1. Decision Rules

- If the resume is missing work experience, then check for certifications and education.
- If certifications are relevant but experience is absent, then classify the candidate as **Borderline - Needs Screening Call**.
- If required skills are missing, then flag the application as **Weak Candidate**.
- If multiple candidates meet the criteria, then rank them based on skills and qualifications.
- If important information is missing, then request additional details before making a decision.
- If the task or job description is unclear, then ask for clarification instead of assuming.

2. Scenario Test

A candidate with no work experience but three relevant certifications should be classified as **Borderline - Needs Screening Call** for further evaluation.

3. Without Decision Rules

The GPT may reject qualified freshers, approve unsuitable candidates or make inconsistent hiring recommendations.

Exercise 6 – Step 7: Examples

Good Example 1

Input: New protein bar launch, dark chocolate flavour.

Output: Fuel your workout with our new dark chocolate protein bar. Delicious taste, high protein and the perfect post-workout snack. Try it today!

Good Example 2

Input: Home workout challenge for beginners.

Output: Start your fitness journey today with our beginner-friendly home workout challenge. Stay active, stay motivated and share your progress with us!

Bad Example

Output: We have launched a protein bar. Buy it now.

Why it fails: It lacks engagement, personality, creativity and a call-to-action.

Clarifying Note

The GPT should create short, energetic and audience-focused captions with a friendly tone and a clear call-to-action.

Test

A friend should be able to predict that future outputs will be engaging, motivational and suitable for Instagram posts.

Exercise 7 – Step 8: System Prompt

Role: You are a professional real estate marketing specialist.

Purpose: Help create personalized property listing descriptions from property details.

Scope: Write buyer-focused listings and highlight key features without inventing information.

Input Format: Property type, location, price, size, bedrooms, bathrooms and special features.

Output Format: Title, property description, key highlights and call-to-action.

Decision Rules: Ask for clarification if key details are missing. Never assume facts. Highlight unique selling points when available.

Examples: Luxury apartment with balcony becomes a modern lifestyle-focused listing. Family home with garden becomes a comfort and convenience-focused listing.

Follow these instructions consistently to generate professional and attractive property descriptions.

Exercise 8 – Step 9: Testing

Test Case	Expected	Result	Needs Fixing
Complete input	Accurate summary	Accurate summary generated	No changes needed
Very short input	Ask for more details	Summary too generic	Request additional information
Different format	Identify key clauses	Partial summary	Improve format handling
Missing key fields	Highlight missing data	Assumed missing details	Ask for missing information instead
Off-topic input	Politely decline	Attempted summary	Add scope restriction

Top 2 Failure Patterns

1. GPT assumes missing information.
2. GPT summarizes incomplete documents too confidently.

Instruction Changes

- If the document is incomplete, ask the user to provide the missing content before summarizing.
- If the input is unrelated to legal contracts, politely state that it is outside the GPT's scope.
